

AUTOSAR High-Level Design - Version 2

1. System Overview

Project: Vehicle Control Platform

Architecture Type: AUTOSAR Classic

Purpose: Coordinate vehicle control and diagnostic data.

2. Software Components

Software Component: EngineControl

Software Component: CommunicationManager

Software Component: DiagnosticManager

3. Interfaces

Interface: EngineStatus

Interface: VehicleStatus

Interface: VehicleCommunication

AUTOSAR High-Level Design - Version 2

4. Ports

Port: EngineControl_StatusPort

Port: DiagnosticManager_DiagnosticPort

Port: CommunicationManager_NetworkPort

5. Signals

Signal: EngineSpeed

Signal: VehicleSpeed

Signal: DiagnosticStatus

6. Dependencies

Dependency: EngineControl -> DiagnosticManager

Dependency: DiagnosticManager -> CommunicationManager

AUTOSAR High-Level Design - Version 2

7. Functional Flow

DiagnosticManager handles vehicle diagnostic information.

EngineControl provides engine state information.

CommunicationManager handles external communication.

8. Architecture Notes

EngineControl uses EngineStatus for engine state information.

DiagnosticManager provides diagnostic services.

CommunicationManager provides network communication services.

9. Revision Notes

SensorManager has been removed.

DiagnosticManager has been introduced.

VehicleStatus interface has been introduced.

Dependency structure has been updated.
